DETAILED ACTION

Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Guy Yonay on February 2, 2005.
3. The application's claim has been amended as follow for typographic error reason:
 - Claim 1, line 1, "micromorror" have been amended as – micromirror --.
 - Claims 21 and 29, line 5, "may be tilted" has been amended as –is operable for tilting--.
 - Claim 29, line 11, "refletve" has been amended as –reflective--.

Reason For Allowance

4. Claims 1-8, 17 and 19-32 are allowed.
5. Following is an examiner's statement of reasons for allowance:

The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the independent claim(s), in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claims 1, 17, 21 and 29, which include (claims 1, 17 and 21) each of the at least two of a plurality of zones having a predetermined tilt orientation for all the reflective elements in that zone, that is different from the tilt orientation of at least one other zone of the at least two of a plurality of

zones; (claims 29) each of the at least two a plurality of zones having a predetermined off direction for all reflective elements in that zone, that is different from the off direction of at least one other zone of the at least two of a plurality of zones.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Goldil et al. (US Patent 6,268,952 B1) discloses apparatus and method of a micromechanical light steering optical switch in Figures 3A, B and 7B comprising of at least two of a plurality of zones (item 206, 208) of separately controllable tiltable reflecting elements, each of the tiltable reflecting elements (item 210) of a zone being operable for tilting about an axis of predetermined tilt orientation associated with the zone between a first reflecting position reflecting an incident beam from (710) to a predetermined on direction; however, Goldil et al. does not teach or suggest wherein each of the at least two of a plurality of zones having a predetermined tilt orientation for all the reflective elements in that zone, that is different from the tilt orientation of at least one other zone of the at least two of a plurality of zones.
